High-level Design (概要设计规约)

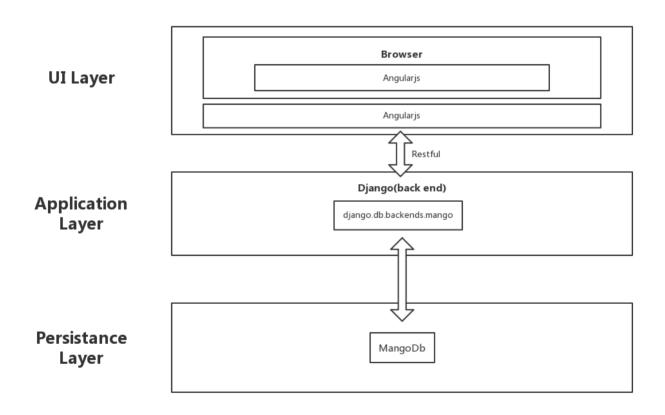

Prototype Design (原型设计)

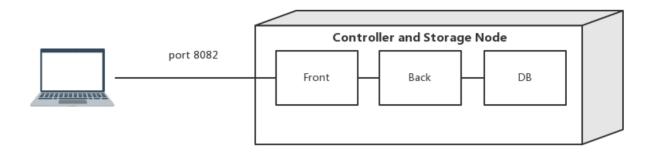

Business Architecture (业务架构)

Technology Architecture (技术架构)

Deployment Topology (部署结构)

数据建模

项目使用的是mongodb,是 nosql 数据库,不是传统关系型数据库,所以没有E-R图

数据库设计

本系统使用的mongodb 数据库, 主要存储了情感词典、测试样例等方面数据

情感词典

- 情感词典分为 主情感词典 和 分情感词典
- 一个主情感词典由一至多个分情感词典组成
- 分词典的条目数有一定限制, 在3000以内
- 示例:

```
1 {
2 主词典名: "知网Hownet词典",
3 分词典集合: [ "程度副词词典","否定词词典","正向情感词典","负向情感词典"]
5 }
```

设计

- o 一个主词典对应一个collection
- o 一个分词典对应一个collection中的一个document
- 。 分词典词条数限制为 5000
- 。 分词典中的词条 分页 存储, 每100 一页, 共有50页
- 。 分词典描述表:

field	Туре	description
_id		
part_dic_name	string	分词典名称
author	string	创建人
create_time	Date	创建时间
last_changed_time	Date	最近修改时间
page_1	0	文档列表
page_2	0	文档列表
		一共由50个page
page_50	0	文档列表

○ 示例: 知网Hownet情感词典(最外层"{}"表示这是一个collection)

```
{
 2
        {
 3
            _id : 0,
4
            main_dic_name: "知网Hownet情感词典",
 5
            author: "huzehao",
            create_time : ISODate("2013-02-22T03:03:37.312Z"),
6
            last_changed_time : ISODate("2013-02-22T03:03:37.312Z"),
 7
8
            part_dic : [ "程度副词词典", "否定词词典", "正向情感词典", "负向情感词典"]
9
        }
10
11
        {
            _id : 1,
12
            part_dic_name : "程度副词词典",
13
14
             author: "huzehao",
             create time : ISODate("2013-02-22T03:03:37.312Z"),
15
            last_changed_time : ISODate("2013-02-22T03:03:37.312Z"),
16
17
            page_1 : [{},{},...,{}],
            page_2 : [{},{},...,{}],
18
19
20
            page_50 : [{},{},...,{}]
21
        }
22
23
        {
            _id : 1,
24
            part_dic_name : "否定词词典",
25
             author : "huzehao",
26
             create time : ISODate("2013-02-22T03:03:37.312Z"),
27
            last_changed_time : ISODate("2013-02-22T03:03:37.312Z"),
28
```

```
page_1 : [{},{},...,{}],
page_2 : [],

page_50 : []

}

...

...

}
```

测试样例

- 样例分为:
 - 。 待审核样例 (未被管理员审核)
 - 。 已审核样例:
 - 无效样例(被管理员否决的样例)
 - 有效样例(被管理员认可的样例)
 - 测出程序错误的样例;
 - 可以对程序出错的原因进行归纳,分组
 - 未测出程序错误的样例;
- 样例包含两个字段:
 - 情感极性: 正向或负向;
 - o 文本:中文字符串;
- 设计:
 - 。 待审核样例存放在一个 collection 中;
 - o 有效样例存放在一个collection 中;
 - 。 测出程序出错的样例和出错原因分组放在一个collection 中;
 - 样例用一个 document 表示;
 - 。 字段设计:
 - 1. waiting_test_sample (待测试样例)

Field	Туре	Description
_id	integer	待测试样例ID
emotion_extremum	integer	待测试样例文本情感极值: 1为正, -1为负
text	String	待测试样例文本
verify_result	Integer	审核结果:1:有效;-1:无效;0:未审核

```
1 | {
2 | {
```

```
3
            _id : 0
4
            emo_extremum : 1,
            text : "你好漂亮呀!",
5
            verify_result : 0
 6
7
        }
8
9
        {
            _id : 1
10
11
            emo_extremum : 1,
12
            text : "你好可爱呀!",
13
            verify_result : 0
14
        }
15
16
17 }
```

2. correct_test_sample (管理员认可有效的样例)

Field	Туре	Description
_id	integer	待测试样例ID
emotion_extremum	integer	待测试样例文本情感极值: 1为正, -1为负
text	String	待测试样例文本
test_result	Integer	测试结果:1:测出了系统的漏洞;-1:没有测出系统的漏洞;0:未测试

```
{
1
2
        {
3
            _id : 0
4
            emo_extremum : 1,
            text : "你好漂亮呀!",
5
6
            test_result : 0
7
        }
8
9
        {
            _id : 1
10
            emo_extremum : 1,
11
            text : "你好可爱呀!",
12
            test_result : 0
13
14
15
        . . .
16
17 }
```

3. effective test sample (测出了程序漏洞的样例)

Field	Туре	Description
_id	Integer	文档表示ID
emotion_extremum	Integer	情感极值: -1 为负向情感; 1 为正向情感
text	String	中文文本
test_information	doc	测试过程中的中间信息示例:(最外层 "{}" 表示 这是一个 collection)
error_type	list	程序出错的原因

```
1
    {
2
        {
 3
             _id : 0
4
            emo_extremum : 1,
5
            text : "你好漂亮呀!",
 6
            test information : {
                 group: "你好漂亮啊",
7
8
                stack: [[1]],
9
                 wordlist: [{'n': '你好', 'k': 'l', 's': 0, 'p': None},
                            {'n': '漂亮', 'k': 'a', 's': 1, 'p': 'pos'},
10
                            {'n': '啊', 'k': 'zg', 's': 0, 'p': None}],
11
                 pair: ('漂亮', '你')
12
             error_type : []
13
14
15
        }
16
17
        {
            _id : 1
18
19
            emo_extremum : 1,
            text : "你好可爱呀!",
20
21
            test_information : {
                group: "你好可爱啊",
22
23
                stack: [[1]],
                 wordlist: [{'n': '你好', 'k': 'l', 's': 0, 'p': None},
24
                            {'n': '可爱', 'k': 'a', 's': 1, 'p': 'pos'},
25
                            {'n': '啊', 'k': 'zg', 's': 0, 'p': None}],
26
                 pair: ('漂亮', '你') }
27
28
            error_type : []
29
        }
30
        . . .
31
32
   }
```

Field	Туре	Description
_id	Integer	文档表示ID
group_name_list	String	分组名

○ 示例:

1.

```
1 {
2 __id : 0,
3 _ group_name_list : ["词典问题", "训练模型问题", "算法问题"]
4 }
5
```

接口规约

dictionary/main_dictionary

接口描述

添加一个主词典

Request Method	POST
Authorization	Required

参数

Name	Located in	Description	Required	Schema
name	form	主词典名	Yes	String
author	form	作者	No	String

Code	Description	Schema
200	Successful response	String

```
post dictionary/main_dictionary
body: form_data : name = asdf
author = admin
```

示例结果

dictionary/main_dictionary/{id}

接口描述

替换给定ID主词典的信息

Request Method	PUT
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	主词典 id	Yes	Integer
name	form	主词典 名称	author 和 name 必须要有一个	String
author	form	主词典 作者	author 和 name 必须要有一个	String

Code	Description	Schema
200	Successful response	String

```
PUT dictionary/main_dictionary/0/
```

示例结果

dictionary/main_dictionary/{id}

接口描述

删除给定ID主词典的信息

Request Method	DELETE
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	Path	主词典 id	Yes	Integer

Code	Description	Schema
200	Successful response	String

```
1 DELETE dictionary/main_dictionary/0/
```

示例结果

```
1  {
2   code : 200,
3   message : "delete successfully",
4   data : null
5  }
```

dictionary/main_dictionary/{id}

接口描述

获取给定id主词典的信息

Request Method	Get
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	query	主词典 id	No	Integer

返回结果

Code Description		Schema
200	Successful response	String

示例请求

```
1 GET dictionary/main_dictionary/1/
```

```
1
 2
           _id : 0,
           main_dic_name: "知网Hownet情感词典",

28
       }
29
30
```

dictionary/main_dictionary/name

接口描述

获取所有主词典名

Request Method	POST
Authorization	Not Required

参数

• 无

Code	Description	Schema
200	Successful response	name_list : list of string

1 dictionary/main_dictionary/name
2

示例结果

1 [
2 "知网Hownet词典",
3 "清华李建军词典"
4]

dictionary/main_dictionary/{id}/part_dictionary/name

接口描述

获取给定ID主词典的所有分词典名

Request Method	Get
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	主词典 id	Yes	Integer

返回结果

Code	Description	Schema
200	Successful response	lemma_list : String

示例请求

dictionary/0/part_dictionary/name

2

示例结果

1 ["程度副词词典","否定词词典","正向情感词典","负向情感词典"]

2

3

dictionary/part_dictionary/{id}

接口描述

获取给定ID主词典的所有分词典名

Request Method	Delete
Authorization	Required

参数

Name	Located in	Description	Required	Schema
part_id	path	分词典 id	Yes	Integer

返回结果

Code	Description	Schema	
200	Successful response	lemma_list : String	

示例请求

1 DELETE dictionary/part_dictionary/1

dictionary/part_dictionary

接口描述

创建一个分词典

Request Method	POST
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	form	从属的主词典ID	Yes	Integer
name	form	分词典名	Yes	String
author	form	作者	No	String

返回结果

Code	Description	Schema
200	Successful response	lemma_list : String

示例请求

```
POST dictionary/part_dictionary

BODY: FORM_DATA: id: 1

name: "create_by_huzehao"

author: "huzehao"
```

dictionary/part_dictionary/{id}

接口描述

获取分词典的描述信息和一页词条

Request Method	GET
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	分词典 id	Yes	Integer
page	query	分词典页数	Yes	Integer

返回结果

Code	Description	Schema	
200	Successful response	lemma_list : String	

示例请求

```
1 GET dictionary/part_dictionary/1?page=1
```

```
1 {
2     __id : 1,
3     part_dic_name : "程度副词词典",
4     author : "huzehao",
5     create_time : ISODate("2013-02-22T03:03:37.312Z"),
6     last_changed_time : ISODate("2013-02-22T03:03:37.312Z"),
7     page_1 : [{},{},...,{}],
8  }
9
```

dictionary/part_dictionary/{id}/page

接口描述

获取分词典的某一页词条

Request Method	GET
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	分词典 id	Yes	Integer
page	query	分词典页数	Yes	Integer

返回结果

Code	Description	Schema	
200	Successful response	lemma_list : String	

示例请求

```
1 GET dictionary/part_dictionary/1/page?page=1
```

dictionary/part_dictionary/{id}

接口描述

修改分词典信息

Request Method	PUT
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	分词典 id	Yes	Integer

返回结果

Code	Description	Schema
200	Successful response	lemma_list : String

示例请求

```
1 GET dictionary/part_dictionary/1/
2
```

```
1 {
2  code : 200,
3  message : "change part dictionary successfully",
4  data : null
5 }
```

dictionary/part_dictionary/{id}/page

接口描述

给分词典添加一页词条

Request Method	POST
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	分词典 id	Yes	Integer
page	form	页数	Yes	Integer

返回结果

Code	Description	Schema
200	Successful response	lemma_list : String

示例请求

```
1 GET dictionary/part_dictionary/1/page?page=1
```

示例结果

dictionary/part_dictionary/{id}/{page}

接口描述

修改分词典某一页词条

Request Method	PUT
Authorization	Required

参数

Name	Located in	Description	Required	Schema
id	path	分词典 id	Yes	Integer
page	path	页数	Yes	Integer

返回结果

Code	Description	Schema
200	Successful response	lemma_list : String

示例请求

```
1 PUT dictionary/part_dictionary/1/
2
```
